Enhancing development *practice* through institutional learning

- Systematic Institutional Learning is a key objective in many institutions and at various levels
- Enables evidence-based decision making
- Two ingredients:
 - (1) Knowledge / Evidence needs to be available => ideally in a systematically generated or collected form
 - (2) “Evidence-to-practice” => knowledge needs to be prepared in a way that can be effectively and easily used for Institutional Learning

— Traditional „Knowledge App“:

—Also in electronic form not necessarily more easily usable

—Key features of a knowledge app: focused on contents and on the needs of the user = easily accessible and comprehensible; searchable and filterable

Developing IDEaL

- Starting point late 2019: Around 1,100 project evaluations since 2007, which systematically evaluate projects using the OECD-DAC criteria => key ingredient (1) systematic evidence base
- Hardcopy versions of these project evaluations were coded into a database, combined with project info from the KfW project management database and country context data, then programmed into an App == key ingredient (2) evidence-to-practice
- IDEaL = **I**nteractive **D**atabase **E**valuation **a**nd **L**earning
- Designed for both intra-institutional learning (internal App live since 2021) and inter-institutional knowledge transfer and transparency – web-based App live since June 2023

Albania 2022 Rating: 3

Municipal Infrastructure Programme II (soft loan)

Project description

The aim was to provide a reliable, hygienically safe water supply at cost-covering and socially acceptable prices and to ensure acceptable sanitation through proper wastewater disposal. This was to contribute to the efficient use of water as a resource, to environmental protection and to improving the living, working and health conditions of the population. The aim was to have a structure-building effect on the sector by professionalizing the utilities (UKs).

Overall rating: 2.7

- 2.1 Relevance
- 2.2 Coherence
- 2.6 Effectiveness
- 2.6 Efficiency
- 2.9 Impact
- 2.8 Sustainability

Albania 2022 Rating: 3

Municipal Infrastructure Programme II (soft loan)

Project description

The aim was to provide a reliable, hygienically safe water supply at cost-covering and socially acceptable prices and to ensure acceptable sanitation through proper wastewater disposal. This was to contribute to the efficient use of water as a resource, to environmental protection and to improving the living, working and health conditions of the population. The aim was to have a structure-building effect on the sector by professionalizing the utilities (UKs).

Lessons Learnt

- Local utilities services providers had to qualify to finance the investments by achieving profitability metrics (milestone approach). In addition to the actual improvements, according to several executing agencies, this has also led to increased awareness of the cost-covering design of the supply.
- Consistent measures to reduce losses are also expedient in regions with a sufficient supply of water, as they improve the economic situation of utilities and thus contribute to the sustainability of the supply.

Albania 2022 Rating: 3

Environmental Protection Lake Ohrid/Sewerage Progradec III

Project description

The project builds on previous investments in the wastewater sector (Phase I and II) and includes expansion of treatment plant capacity and future phosphorus elimination.

Lessons Learnt

- In general, it is recommended that the operator's voluntary self-monitoring of discharge values be supplemented by independent external monitoring.
- A significant and, in particular, sustainable reduction of the chemical load and also of the nitrate

Enhancing development *research* through meta analysis

- Research paper “*Volume, risk, complexity: what makes development finance projects succeed or fail?*”
- Jointly with Yota Eilers, Jörg Langbein, Lennart Reiners
- Augmented version of the IDEaL database: project characteristics clusters (i) financing, (ii) structure, (iii) complexity, (iv) risks, plus (v) evaluation and (vi) country context
- N=5,608 project success ratings on a discrete 6–1 scale using OECD-DAC criteria
- 96 LMIC countries with projects implemented during 1990–2020

Results: project finance

<i>Dep. variable:</i> Rating (Pooled)	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
Total volume (log)	0.049** (0.021)							0.029 (0.028)	0.037 (0.029)

% budget funds of ODA					0.000 (0.000)			-0.000 (0.000)	-0.000 (0.000)
% project funds of GDP						0.000 (0.000)		-0.000 (0.000)	-0.000 (0.000)
Disbursement vs. commitment							0.169 (0.165)	0.178 (0.163)	0.137 (0.156)
Full specification									Yes
Sector and region indicators	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Sub-rating indicators	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Other control variables	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Observations	5608	5608	5608	5608	5608	5608	5608	5608	5458
Adjusted R^2	0.15	0.14	0.15	0.15	0.14	0.14	0.14	0.15	0.23

—Some evidence for larger projects with greater ownership faring better

Results: project complexity

<i>Dep. variable:</i> Rating (Pooled)	(1)	(2)	(3)	(4)	(5)	(6)	(7)
Project duration (log)	-0.234*** (0.069)					-0.215*** (0.073)	-0.149** (0.075)
Delay		-0.032 (0.069)				0.009 (0.070)	0.009 (0.069)
Revised ToC			-0.071 (0.049)			-0.060 (0.049)	-0.048 (0.047)
Years mandate to contract				-0.030 (0.024)		-0.026 (0.023)	-0.048* (0.027)
Technical complexity					-0.117** (0.055)	-0.083 (0.056)	-0.130** (0.055)
Full specification							Yes
Sector and region indicators	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Sub-rating indicators	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Other control variables	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Observations	5608	5608	5608	5598	5608	5598	5458
Adjusted R^2	0.15	0.14	0.15	0.14	0.15	0.16	0.23

—Most dimensions of project complexity exert negative influence

Results: project risks

<i>Dep. variable:</i> Rating (Pooled)	(1)	(2)	(3)	(4)	(5)	(6)
Number ex-ante identified risks	-0.004 (0.013)				0.002 (0.013)	0.001 (0.013)
% ex-ante identified risks occurred		-0.504*** (0.068)			-0.464*** (0.067)	-0.486*** (0.067)
Overall risk (base: low)						
-Medium			-0.251*** (0.080)		-0.185** (0.078)	-0.203** (0.082)
-(Very) high			-0.460*** (0.086)		-0.326*** (0.084)	-0.352*** (0.088)
-Not assigned			-0.285*** (0.109)		-0.159 (0.116)	-0.219* (0.116)
Overall risk control (base: low)						
-Medium				0.075 (0.058)	0.070 (0.055)	0.084 (0.058)
-High				0.001 (0.253)	-0.065 (0.193)	-0.061 (0.169)
-Not assigned				0.090 (0.096)	- (.)	- (.)
Full specification						Yes
Sector and region indicators	Yes	Yes	Yes	Yes	Yes	Yes
Sub-rating indicators	Yes	Yes	Yes	Yes	Yes	Yes
Other control variables	Yes	Yes	Yes	Yes	Yes	Yes
Observations	5608	5608	5608	5608	5608	5458
Adjusted R^2	0.14	0.18	0.16	0.15	0.19	0.23

—Higher-risk projects – both ex ante and ex post – fare worse

Additional findings

- Heterogeneous effects by region and sector
- Detailed project-level characteristics show that design matters less than expected
- Project manager turnover and success rating: marginally positive correlation
- Key explanatory clusters are finance (positive correlation) and complexity & risks (negative correlation)
- Evaluator- and evaluation-specific characteristics uncorrelated with assigned project success ratings
- Empirical results robust to alternative models
